Chelsea Hidalgo

I mentioned TDD and would need to discuss before we can spend money on Risk

Risk address soil stockpile, groundwater to Arkansas River

- On site worker, trespasser, general public
- GW discharge to AR river
- State of OK wants property to be unrestricted when released
- Potential future residents
- I said we look at immediate threat in order to do any type of removal

Dilution in AR river may reduce exposure at drinking water intake

AR River

 Dermal
 Water intake for drinking
 Fish consumption

Criner will look at groundwater to see if there is any consumption connected to site

Jim will look at AR river impacts

To determine amount of discharge to river will look at amount wastewater treated and contamination level

2014 Rad CERCLA site in q and a format says 12 mrem per year is protective. Can look at Radium benchmark dose and second rad doc.

Can determine radium benchmark dose.

I said don't do anything until we review tdd to make sure we have enough money and authority to do risk assessment.

If we determine TDD is appropriate and there is enough money, Bluestone will develop scoping doc to describe risk evaluation activities. I will get with Jeff on Monday to approve.
